

Assignment 5: RNN for Generating Text

Description:

- Get some documents from Wikipedia (related documents “in same domain”)
- 1. **Implement** Character-based RNN (**Implement from scratch**)
 - Prepare Training samples
 - Train the model with different number of iterations
[Model-1 “500 iteration”, Model-2 “1000 iteration”, Model-3 “2000 iteration”]
 - Test the 3 models
- 2. **Implement** Word-based RNN (**Implement from scratch**)
 - Prepare Training samples
 - Use any word embedding model
 - Train the model with different number of iterations
[Model-1 “500 iteration”, Model-2 “1000 iteration”, Model-3 “2000 iteration”]
 - Test the 3 models

Bonus:

- Use GRU & LSTM instead of RNN
- Decide which of the implemented models was the best for generating data
- The assignment discussion will be held on next **Sunday 4/5** at the lab.
